

In order to cover the Ebro Observatory's prime lines of research the Workshop will focus on the fields of Geomagnetism, Aeronomy and Seismology; inviting several outstanding international specialists who, after conducting a tutorial lecture or conference, will open a turn of short presentations and discussions among the attendants.

The Workshop is thought to address the following questions:

- Is the observation of geophysical parameters still necessary? When will we have enough information?
- From where and how should the new observations be done?
- To what extent are our models reflecting the reality? In which way can they be improved?
- Frontier and multidisciplinary topics including Geomagnetism, Aeronomy and Seismology

Invited Speakers

Keiiti Aki
Enric Banda
Manuel Catalán Pérez-Urquiola
David J. Kerridge
Philippe Lognonné
Raúl Madariaga
Sandro Radicella
Jean L. Rasson
Bodo Reinisch
Arthur D. Richmond
Donald L. Turcotte
Erhard Wielandt
